Informational Notes

1. [Illinois] Environmental Protection Act: 415 ILCS 5/1 et seq.; and The Electronic Products Recycling and Reuse Act: 415 ILCS 150/5 et seq.
2. Illinois Pollution Control Board: 35 Ill. Adm. Code, Subtitle G.
3. Statutory and regulatory references herein are provided for convenience only and should not be construed as legal conclusions of the Agency or as limiting the Agency's statutory or regulatory powers. Requirements of some statutes and regulations cited are in summary format. Full text of requirements can be found in references listed in 1. and 2. above.
4. The provisions of subsection (p) of Section 21, subsection (k) of Section 55 of the [Illinois] Environmental Protection Act shall be enforceable either by administrative citation under Section 31.1 of that Act or by complaint under Section 31 of that Act. Violation of the Electronic Products Recycling and Reuse Act shall be enforceable by administrative citation under Section 20(k) of that Act, or referral to the Attorney General, pursuant to Section 20(a) of that Act.
5. This inspection was conducted in accordance with Sections 4(c) and 4(d) of the [Illinois] Environmental Protection Act: 415 ILCS 5/4(c) and (d); and Section 20(a) of the Electronic Products Recycling and Reuse Act: 415 ILCS 150/20(a).
6. Items marked with an "NE" were not evaluated at the time of this inspection.

Evanston/Evanston Transfer Station

Author: Donna Czech

Narrative

On August 14, 2015 a solid waste inspection was conducted at the subject site in order to determine the facility's compliance with its operating permit (1984-2-DE/OP) and the applicable regulations. The Agency's inspectors were Donna Czech and Richard Finley of the Bureau of Land. Michael Rice, the site manager, was interviewed by telephone after the inspection. The weather was about 80°F and the site was relatively dry.

Veolia Environmental Services submitted a supplemental permit application (Log No. 2013-005) dated December 31, 2012 to the Agency requesting a name change for the subject facility from Veolia - Evanston Transfer Station to Advanced Disposal Services Solid Waste Midwest, LLC. The name change was approved by the Agency in Supplemental Permit No. 2013-005-SP, dated March 21, 2013.

The site's permitted operating hours to receive waste are from 6:00am to 6:00pm Monday through Saturday. The quantity of waste currently being accepted is approximately 500 tons a day. The facility accepts municipal solid waste and construction and demolition debris.

The following materials are not accepted at this facility: hazardous waste, special waste, electronic waste, yard waste and potentially infectious medical waste (PIMW). Solid waste that leaves the subject facility is currently being shipped to Zion Landfill in Zion, Illinois for disposal.

Scrap tires are pulled out of loads of incoming refuse and stored in a closed container in the yard south of Church Street. When the container is filled, it is taken to Northbrook Transfer Station (another Advanced Disposal facility) where the tires are consolidated for shipment to Shred-All Recycling in Chicago, Illinois.

White goods are not accepted at the subject facility. Incidental amounts of scrap metal, when they are received, are loaded into the transfer trailers for disposal.

The new transfer station building has been completed and has been in operation since November 2005. A new scale house has been constructed along with a new scale for incoming vehicles. The existing scale for outgoing vehicles was relocated to an area adjacent to the new scale office. Loaded transfer trailers are weighed on a scale inside the loading ramp.

All waste is removed from the tipping floor at the end of the operating day. About three times a week, the tipping floor is cleaned with a sweeper after the waste has been removed. Waste may be stored overnight in covered transfer trailers at this facility. No waste may be stored on site over the weekend or over any non-operating days.

Litter is collected from the transfer station grounds throughout the operating day. A street sweeper is used to clean the grounds on site and the nearby streets. An exterminator (Anderson Pest Control) inspects the facility every month for vector control.

Recyclable materials (cardboard and paper) were not being accepted at the time of this inspection. During a meeting held on September 21, 2010 between Jeffrey Ellerd of Veolia and Chuck Grigalauski, the Regional Manager at the Agency's Des Plaines office, it was agreed that the Evanston Transfer Station is authorized to accept commingled or source separated recyclables under the existing operating permit.

Evanston Transfer Station received authorization to install a tarping station along the west property line with the issuance of Supplemental Permit No. 2010-461-SP, dated December 1, 2010. The tarping station had not been constructed as of the date of the inspection. Mr. Rice stated that Veolia is waiting for approval from the City of Evanston to install the tarping station. Other proposed activities at the site include demolition of the building located at 1711 Church Street and the addition of an above ground diesel fuel tank on the transfer station property.

In a supplemental permit application (Log No. 2011-286) dated June 22, 2011, Veolia requested modifications to the site entrance following the demolition of the building located at 1711 Church Street. The application also requested the removal of Condition 17 from Supplemental Permit No. 2010-461-SP. That condition requires all site modifications to be approved by the local unit of government under its zoning jurisdiction. The Agency approved Veolia's plan for the entrance of the facility and approved changes to Condition 17 with the issuance of Supplemental Permit No. 2011-286-SP, dated September 20, 2011. Mr. Rice stated that Veolia is currently negotiating with the City of Evanston regarding demolition of the building located at 1711 Church Street and the associated modifications to the entrance of the site.

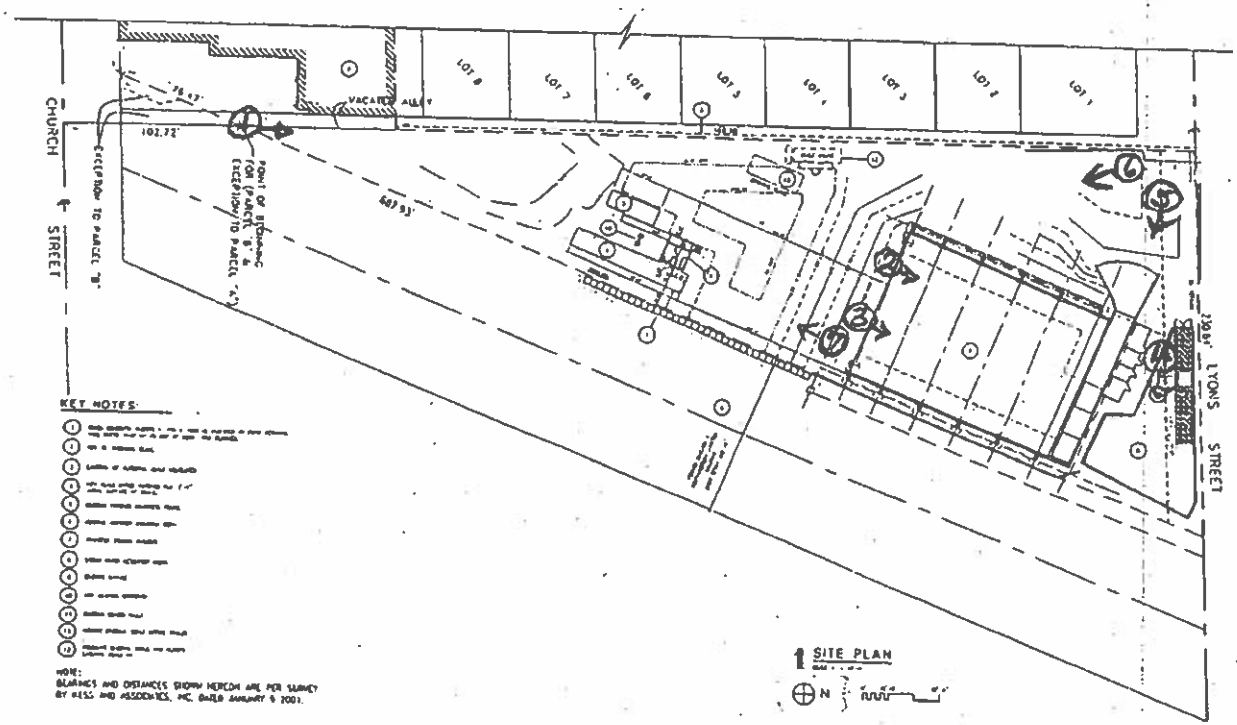

There was no disagreeable odor detected at the site at the time of the inspection. Upon entering the site, it was apparent that the misting system installed in the ceiling of the transfer station building was in use for odor control. The misting system, which is used to spray a deodorizing chemical, is operated during warm weather to minimize the strength of the odor from the refuse. A new misting system has been installed in the ceiling to replace the original system. The new system is positioned lower and it sprays the deodorizing chemical on the refuse more effectively than the original system.

At the time of this inspection, no apparent violations of the facility's operating permit or the applicable regulations were observed.
