Chuck,

Not sure the nature of Scott's request but he's requesting an inspection of the Veolia Transfer Station in Evanston in August. Thanks

Todd

Subject: RE: Veolia Evanston transfer station ...

Todd,

Can we please inspect again in August?

Thanks.

Scott

Subject: Veolia Evanston transfer station ...

Todd,

Have we inspected the Veolia Evanston transfer station recently? Any violations?

Thanks.

Scott

Neighbors complain of odor, trash from local waste site Facility's 1984 permit has more lenient regulations than today

Published: Wednesday, July 27, 2011

Updated: Wednesday, July 27, 2011 20:07

The smell, like sour milk and diapers, hits passersby from blocks away. Then the roar of grinding metal. Then the sight of heaps of trash, mere feet from the nearest condominiums. Just four streets over from Evanston Township High School, across from a public park, the Veolia waste transfer site is working through its daily 520 tons of garbage.

Neighbors of the facility at 1711 Church St. say they've been complaining about its operating practices for decades. Its odor chokes the air on summer days. Garbage escapes into the streets. And the nearest homes are close enough to touch the dump's fence from their windows – hardly the 800-foot distance now mandated by law.

If the site's owners applied for a permit today, Illinois Environmental Protection Agency officials say, the agency likely would not grant one. But because the site was licensed in 1984, it is exempt from updated environmental regulations.

Since the IEPA controls Veolia's permit, Evanston officials have limited options for addressing residents' grievances. But on July 14, the city issued the site its first odor fine in at least 10 years, raising hopes among Veolia's critics that change, and not just the stench of rotting garbage, is in the air.

"Dirty, filthy garbage"

When developer Muffy McAuley bought a set of commercial buildings at Church Street and Darrow Avenue, she knew they bordered a waste transfer site, she said. But Veolia assured her and other neighbors that the company was working to lessen its impact on the area. In a 2000 to 2003 plan for improving Evanston's West Side, Veolia said it would soon construct an enclosed building to contain its waste.

Instead, Veolia built a "tin shed" resembling a carport, with one side wide open, McAuley said. The area's hygiene has not improved at all.

"You can feel it in your eyes, you can feel it when you breathe, you can see the particulate matter in the air half the time," McAuley said. "It is an unending stream of dirty, filthy garbage."

Veolia community relations manager Melanie Williams said the IEPA has found the facility compliant with its regulations. The company does what it can to mitigate the smell and noise.

"Our goal is to be a good neighbor," Williams said.

According to documents posted on a city website about the waste transfer site, complaints like McAuley's have been circulating for years. In 2001, a neighbor of the facility described "huge mountains of uncovered garbage … rotting in the sun." In 2007, someone wrote to the IEPA about "filthy, malodorous trucks" entering and leaving the site. And in 2009, a landscaping crew working nearby became ill due to "the acrid, biting odor."

The 3.7-acre waste transfer site was never meant to handle the amount of garbage it processes today, said Tanya Noble, head of Evanston Citizens for Environmental Justice, a group founded in February to advocate the dump's closure. The facility started as a family-owned business but was purchased by Veolia Environmental Services, a $15-billion corporation, in 1984. It now takes in trash from around the North Shore, mostly from outside Evanston.

Some of the neighbors Noble has spoken to have been decrying the site for 50 years, she said. But until recently, no government officials had taken action against Veolia.

Raising a stink

Realizing Veolia would not address its hygiene issues to her satisfaction, McAuley reached out to Evanston leaders. She pointed out the odor and noise from the dump violated the city's laws. Evanston's nuisance ordinance makes creating "such an offensive smell as may taint the air and render it unwholesome or disagreeable to the neighborhood" punishable by a $750 fine.

But Evanston officials told her they could do nothing, McAuley said. Only the IEPA has the power to grant and revoke waste transfer permits in Illinois.

Most Evanston officials declined to be interviewed for this story, saying they could not comment on ongoing legal issues. Ald. Delores Holmes (5th), whose ward borders the dump, said only that she knows neighbors have called the city about the smell.

So McAuley began researching the IEPA's guidelines. She found several the site seemed to be violating, including one requiring waste transfer stations built in Cook County to be at least 800 feet from the nearest residence.

With the information she had gathered, McAuley approached IEPA agents. But they too said their hands were tied. As long as the facility remains in compliance with the license it was issued in 1984, the IEPA cannot charge it with any violations.

"It's like saying, 'OK, we know lead-based paint causes catastrophic health problems for children, but those places that still have lead-based paint, it's okay,'" McAuley said.

Noble got a similar reaction when she met with IEPA officials in Springfield recently, she said. The officials told her no waste transfer site in Illinois has ever had its permit revoked. They also said they did not have the funds to study the Evanston site's potential environmental hazards.

"No one actually can answer the question, 'What kind of environmental impact is this having on the city?'" Noble said.

IEPA permitting official Sallie Flynn confirmed Veolia does not have to apply for permit renewal at the Evanston site. The company has modified the facility several times, and on those occasions it has had to justify the changes, she said.

Due to the facility's proximity to residential buildings, "if they applied today, they might not get a permit," Flynn said. But regulations in 1984 were much more lenient.

Only once in the past decade has the IEPA found the site in violation of its license, according to the city's website about the facility. In August 2007, an inspector discovered workers had stored trash in open dumpsters for multiple days, violating the requirement that waste stored overnight be in closed containers. The inspector also reported odor problems. But a subsequent inspection found no issues, so Veolia was not prosecuted.

Cleaning up their act

Despite a history of disappointing responses from officials, both McAuley and Noble said recent events have given them hope.

Since November, Evanston Health Department employee Ashley McIlwee has been monitoring the Veolia site to ensure it remains compliant with city codes. In December and January, she visited every few days, patrolling the perimeter.

McIlwee declined to be interviewed for this story. But on July 14, she handed the facility's owners the first fine they have received from the city in at least 10 years, according to city documents.

To Noble, the $625 charge for odor problems indicates the city is taking her group seriously.

"We finally feel like someone's listening," Noble said.

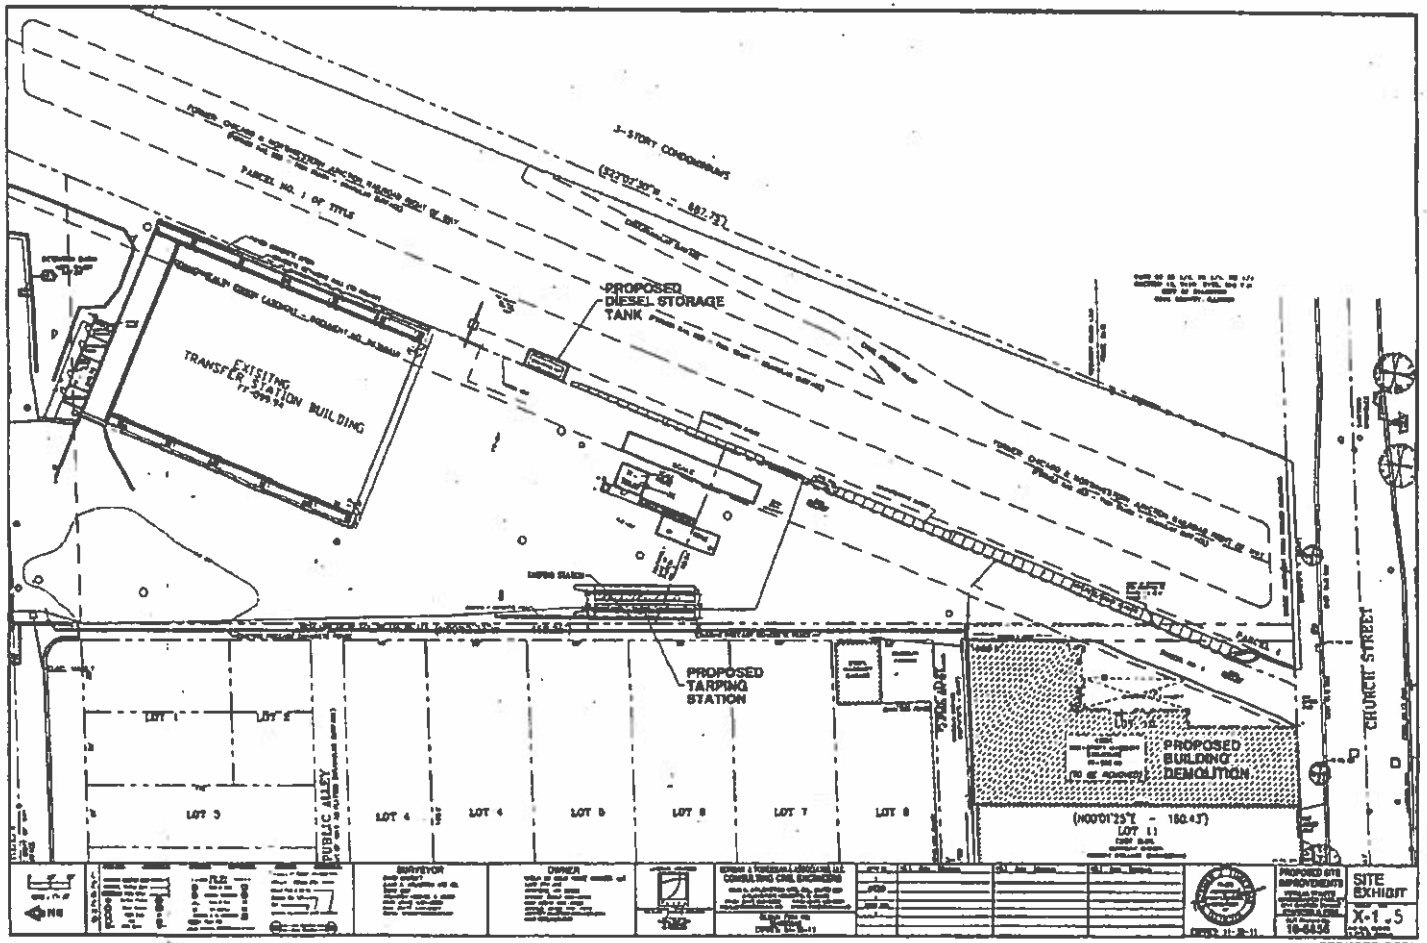

Veolia plans to contest the fine, Williams said. The company also has plans of its own to improve conditions for neighborhood residents. In the fall, it will plant 20 to 30 pines between the dump and nearby condos. Veolia representatives continue to negotiate with the city, she said.

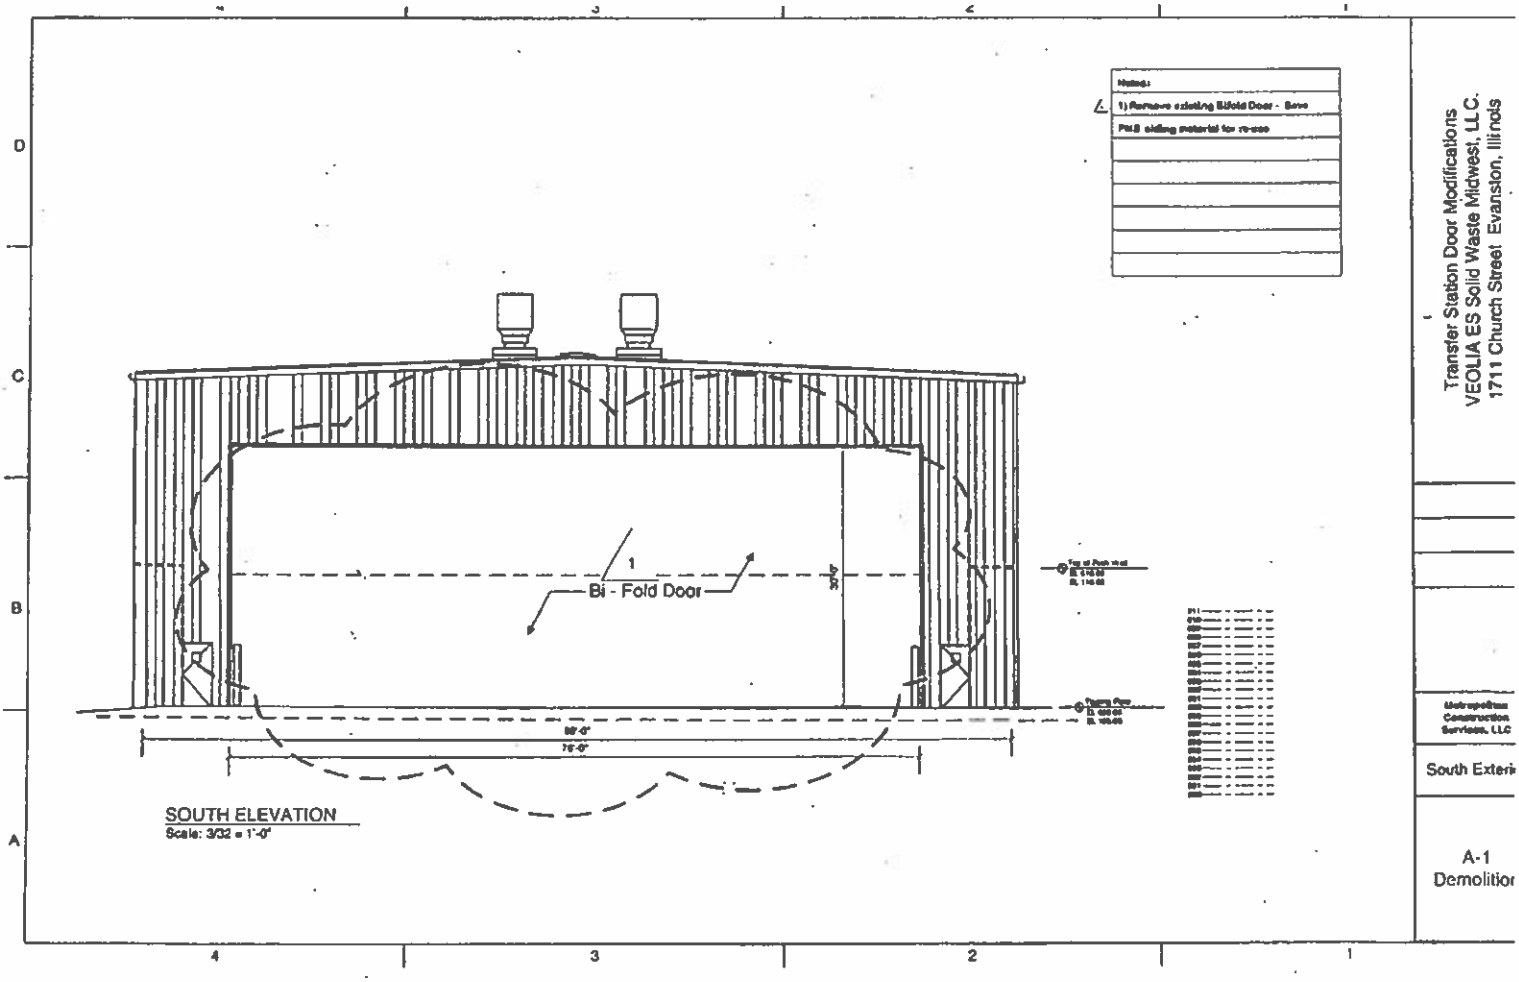

While Veolia sows trees, Citizens for Environmental Justice will be working with Northwestern's Brady Scholars to complete an environmental impact study of the trash facility, Noble said. She is particularly excited for this collaboration because she has been told the University is one of the dump's heaviest users, she said. She said she hopes this will be a turning point for NU.

McAuley said she does not see Veolia as "an evil company." But she too feels validated by the fine, she said.

"We're just looking for an even playing field," she said.

Narrative

On August 30, 2011 a solid waste inspection was conducted at the subject site in order to determine the facility's compliance with its operating permit (1984-2-DE/OP) and the applicable regulations. The inspection was conducted in response to a special request from Springfield (See attached). Ryan Strong, the site manager, was interviewed during the inspection. The weather was about 75°F and the site conditions were dry.

In 2006, Veolia Environmental Services, the parent company of Onyx Waste Services Midwest, Inc., decided to change the name of its Onyx companies to Veolia. The subject facility has been operating as Veolia Environmental Services since that time.

The site's permitted operating hours to receive waste are from 6:00am to 6:00pm Monday through Saturday. The quantity of waste currently being accepted is approximately 500 tons a day. The facility accepts municipal solid waste and construction and demolition debris.

The following materials are not accepted at this facility: hazardous waste, special waste, yard waste and potentially infectious medical waste (PIMW). Solid waste that leaves the subject facility is currently being shipped to Zion Landfill in Zion, Illinois for disposal.

Scrap tires are pulled out of loads of incoming refuse and stored in a closed container in the yard south of Church Street. When the container is filled, it is taken to Northbrook Transfer Station (another Veolia facility) where the tires are consolidated for shipment to Shred–All Recycling in Chicago, Illinois.

White goods are not received at the subject facility. Incidental amounts of scrap metal, when they are received, are loaded into the transfer trailers for disposal.

The new transfer station building has been completed and has been in operation since November 2005. A new scale house has been constructed along with a new scale for incoming vehicles. The existing scale for outgoing vehicles was relocated to an area adjacent to the new scale office. Loaded transfer trailers are weighed on a scale inside the loading ramp.

All waste is removed from the tipping floor at the end of the operating day. About three times a week, the tipping floor is cleaned with a sweeper after the waste has been removed. Waste is sometimes stored overnight in covered transfer trailers at this facility. No waste may be stored on site over the weekend or over any non-operating days.

Litter is collected from the transfer station grounds throughout the operating day. A street sweeper is used to clean the grounds on site and the nearby streets. An exterminator (Anderson Pest Control) inspects the facility every month for vector control.

RELEASABLE

REVIEWER

Recyclable materials (cardboard and paper) were not being accepted at the time of this inspection. During a meeting held on September 21, 2010 between Jeffrey Ellerd of Veolia and Chuck Grigalauski, the Regional Manager at the Agency's Des Plaines office, it was agreed that the Evanston Transfer Station is authorized to accept commingled or source separated recyclables under the existing operating permit.

Evanston Transfer Station received authorization to install a tarping station along the west property line with the issuance of Supplemental Permit No. 2010-461-SP, dated December 1, 2010. The tarping station had not been constructed as of the date of the inspection. Mr. Strong stated that Veolia is waiting for approval from the City of Evanston to install the tarping station. Other proposed activities at the site include demolition of the building located at 1711 Church Street and the addition of an above ground diesel fuel tank on the transfer station property.

In a supplemental permit application (Log No. 2011-286) dated June 22, 2011, Veolia requested modifications to the site entrance following the demolition of the building located at 1711 Church Street. The application also requested the removal of Condition 17 from Supplemental Permit No. 2010-461-SP. That condition requires all site modifications to be approved by the local unit of government under its zoning jurisdiction. Veolia submitted a second supplemental permit application (Log No. 2011-372) dated August 16, 2011. That application requested modifications to the transfer station building including replacing the bi-fold aircraft hangar style doors with four standard high lift garage doors. Both permit applications are currently undergoing review by the Agency's Bureau of Land Permit Section.

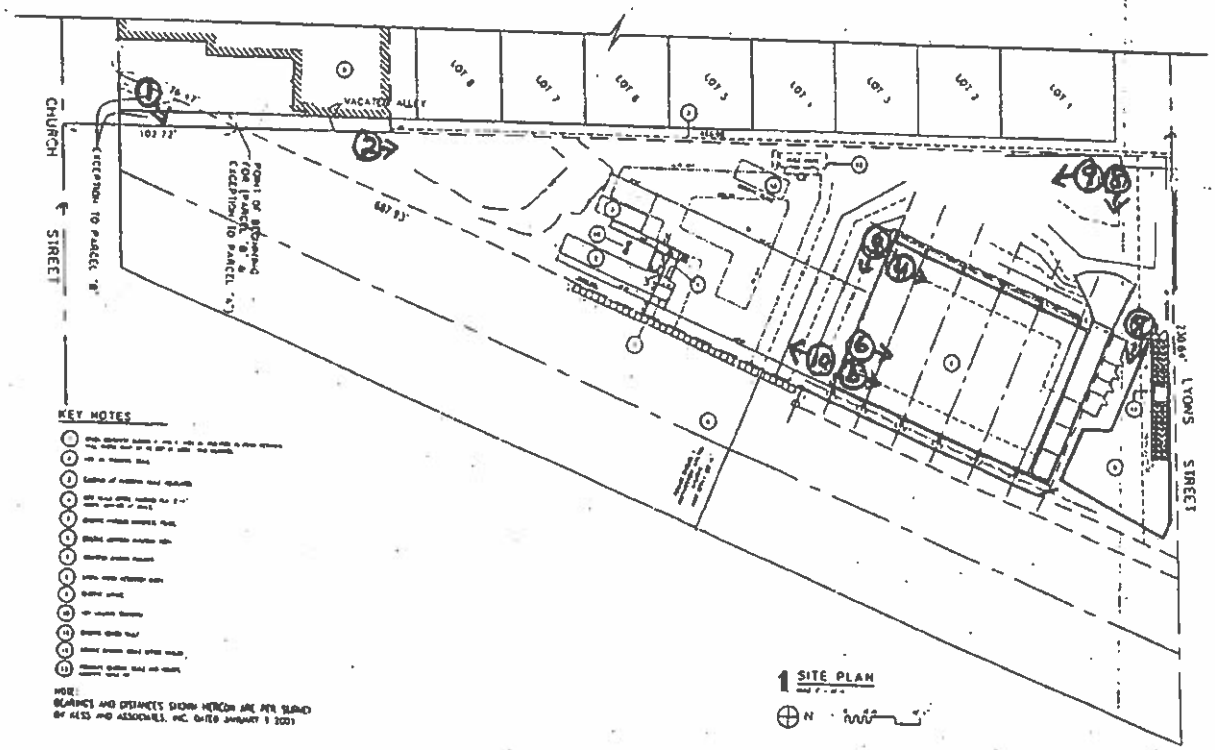

There was no disagreeable odor detected at the site at the time of the inspection. A portable turbine unit that sprays a deodorizing chemical directly on the refuse that has been unloaded on the tipping floor was not being used at the time of this inspection. The unit, which is capable of spraying with a large amount of pressure, is used during very hot weather in addition to the misting system installed in the ceiling of the transfer station building. The misting system, which is used to spray a deodorizing chemical, is operated during the warm weather to minimize the strength of the odor from the refuse. A new misting system was recently installed in the ceiling to replace the old system. The new system is positioned lower and it sprays the deodorizing chemical on the refuse more effectively than the original system. Odor control granules are also being used every day.

At the time of this inspection, no apparent violations of the facility's operating permit or the applicable regulations were observed.
