Water Storage Replacement – Pre-Work

August 4, 2017

Project Description

The City of Evanston is currently designing the replacement of the 5 million gallon water storage reservoir at the Water Plant. This reservoir is a below-grade structure beneath the Northwestern University parking lot at the southwest corner of Lincoln Street and Campus Drive, and serves as clearwell storage for the treatment process.

In preparation of construction of the new reservoir that is scheduled to begin in 2018, Northwestern University is installing a sheetpile wall between the existing reservoir and the two buildings to the west of the reservoir. The sheetpile wall will be approximately 40 feet deep and serve to protect neighboring buildings while providing shoring during the removal and replacement of the existing reservoir.

Schedule

Installation of the sheetpile is scheduled to begin on **Tuesday, August 8, 2017**, and be complete by September 1, 2017.

Contractor

The contractor for this project is Walsh Construction, 929 West Adams Street, Chicago, IL

City Monitoring

This project is being managed by Northwestern University. However, because of the impact to the City's infrastructure, additional monitoring is being provided by the City's Public Works Agency. If you have any questions or concerns, please do not hesitate to contact Paul Moyano, P.E., Senior Project Manager at (847) 448-8217 or pmoyano@cityofevanston.org.
